

Puppy Problems

Miss Weber has a very energetic puppy. Max, the puppy, loves to play outdoors, so Miss Weber decided to build a pen to allow Max to be outside while she is at school. She just happens to have 50 feet of fencing in her storage shed that she can use for the pen.

What are three of the ways she can set up the pen that uses all of the fencing?

What are the dimensions of the rectangular pen with the most space available for Max to play?
